Step 1:

Position the two **6ft Pipes** at one end of the Spine, and place the two **2ft Pipes** at the opposite end. Make sure to align the pipes so that the module openings are situated beneath them, as shown.

Step 2:

Line up the two **6ft Pipe** on either side of the Spine. Take one **Hex Bolt** and place a **Flat Washer** on it, then insert four of these assembled bolts through the corresponding aligned holes. On the open end of each bolt, add a **Flat Washer** followed by a **Lock Washer**, and finally, secure it with a **Hex Bolt**.

Step 3:

Repeat Step 2 with **2ft Pipe** on the opposite side.

Step 4:

Attach the Spine to your ninja rig's cross pipes using the **Fixed 90° Scaffold Clamps**. After mounting, insert a **Safety Pin** at the top of the pipes so that the pin is above the **Scaffold Clamp**.
